This is an alpha version of LEXICON intended for test playing. This system was written by Jesse Galena. For any questions, you can email me at jessegalena@gmail.com or contact me through social media (@LexiconJesse on Twitter, u/LexiconJesse on Reddit). Stay awesome.

Most roleplaying games give you a set of rules, make you learn them, and then you have to change your ideas until they fit within the rules of the system.

This game works the opposite way. It starts with the character you want to play. How do they think? What makes them special? What do they enjoy? What are they afraid of? Why do you want to play this character?

It takes the character you want to play and provides rules to allow you to do what you want.

At its core, this system is designed to do 3 things:

- Be fun as a player and a game master
- Have everything focus on roleplaying
- Be able to learn it in less than 10 minutes

No matter what you do in this system, there are a few constant rules.

You will only roll 2d4. No matter the purpose or the reason, you will only ever roll 2d4.

No matter what you do, you will always involve one or more of these factors:

- Roleplaying
- Using qualities, temporary or permanent
- Everything works in increments of one, either +1 or -1

Everything requires roleplaying. To use qualities and use their bonus, you must invoke them through roleplaying (further explained in “How to perform an action” below). This is not a game about rolling dice and hearing results. This is a game about living in moments and using your strengths to overcome any obstacle.

Qualities

Qualities are words and short phrases that show who your character is. A quality can be a single word, such as brawler, magician, and brave, but it can also be a short phrase such as loves animals, hates the sight of blood, and works better as a team. It shows why they do what they do, what they are good at, what they are learning, how they protect themselves, and what they’re vulnerable to. Qualities always go into one of three places: motivations, traits, and skills.

Motivations, Traits, and Skills

Motivation is your character’s drive. Vengeance, to make friends, and show off are all examples of motivations.

Traits are who your character is rather than what they’ve learned. Brave, morally rigid, and charming can be long-term conditioning or talents that come almost naturally to you.

Skills are things you had to practice, study, or learn. Blacksmithing, sword fighting, and flirting are qualities that need to develop with time.

Some qualities can work as both a trait and a skill. For example, brave may be something you’ve always felt (traits) or something you’ve developed over time (skills). A character born with the power to use magic (traits: born with magic blood) is different from someone who studied magic (skills: wizard). Both mean you can use magic, but they each show different ways of how you gained their magical prowess. You could also have both, just because you were born with the ability to use magic, doesn’t mean you can’t also study it. Likewise, a person with the skill Blacksmith could also have the trait talks to metal to show their innate ability for the craft.

Having multiple qualities that focus on a particular facet makes it more useful and versatile. If you have the qualities born with magic in my blood, wizard, wand user, and pyromancer, you have a lot more options and a lot more magical prowess than another character who has sorcerer as their only magic-based quality.

The Character Sheet

Your character sheet has three parts:

- Qualities
- Inventory
- Damage counters

Lexicon RPG | Jesse Galena | 3
Every Quality has Two Sides
Most qualities offer a boon to characters. However, now matter how perfect a quality may seem, there will be situations where it doesn’t help you or acts as a bane.

Being a gnoll with the quality **massive** may help you when scaling walls or hauling things, but the GM may give you a -1 when in tight spaces because of it.

Qualities always have the potential to be used for or against to depending on the situation. They can also affect you physically, mentally, or emotionally.

Likewise, qualities that often cause issues can become a gift. A character with the quality **insomniac** may have problems sleeping but can use that against any sleep-inducing magic or from growing weary over a long travel.

Starting Qualities
New characters start with 10 qualities total, with a minimum of 2 in each category. If a new character joins an existing game, the number of starting qualities is up to the GM, though close or equal to the party average is recommended.

<table>
<thead>
<tr>
<th>NUMBER OF QUALITIES</th>
<th>RANKING</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-9</td>
<td>Henchmen</td>
</tr>
<tr>
<td>10-14</td>
<td>Accomplished</td>
</tr>
<tr>
<td>15-19</td>
<td>Competent</td>
</tr>
<tr>
<td>20-24</td>
<td>Knowledgeable</td>
</tr>
<tr>
<td>25-26</td>
<td>Proficient</td>
</tr>
<tr>
<td>30-34</td>
<td>Seasoned</td>
</tr>
</tbody>
</table>

Accomplished characters can change up to 2 qualities at any time for a different quality without penalty, though they must inform the GM. Every other ranking, a player may change up to 1 quality on their character to another. All other quality changes should be GM approved.

Using Qualities for Protection
Qualities are also used when you need protection. The ability to protect your physical body doesn’t have to be as simple as **full platemail**, **Kevlar vest**, and **parrying**. There are many ways to protect yourself. **My stunning smile**, **my bitchin’ coat**, or **faith that no one can hit me** may protect you just as well as a suit of armor. A quality such as **small stature** can help you avoiding attackers, but it also works when trying to squeeze into a tight space.

This method of defense also applies to mental and emotional effects as well. If something frightens a character, a quality such as **brave** or **faith in my god** can give them a bonus avoiding such things. Likewise, a quality like **strong willed** may keep people from influencing a character.

How to Choose Qualities
Start with general qualities. If your character is **smart**, **clever**, **strong**, or **quick**, make one of those a quality. General qualities allow you to use them in many situations.

You can have multiple general qualities, but you can only use one broad quality per action. The GM must let you know if a quality is general or specific.

Next, choose specific qualities that build off your broad qualities. If you chose **strong**, then think about how they solve problems, how they socialize, how they fight, etc. They could have **brawler** and **no use for a weapon** as specific qualities that help them fight.

A quality such as **act first** or **leave plan making to someone else** can be useful when starting combat or trying to open a lock by smashing it.

Qualities are meant to be multipurpose, but you’ll need to hone in on how your character thinks and acts to allow you to have more useful qualities and thus be more successful.

Clusters
As characters advance, they get more qualities. Rather than always invoking individual qualities, you can cluster related qualities together and invoke all of them.

For example: if a Charlane the pirate has the qualities **sword fighter**, **razor-sharp cutlass**, **one-handed sword fighting**, and **swashbuckler**, she can create a “cutlass” cluster, giving her +4 to actions directly involving using a cutlass onehanded. If she adds a new quality like **cutlass expert**, then her cutlass cluster gives her +5.

Players can add other qualities when using a cluster. For example, if Charlane is sword fighting
on the deck of a rocking ship at sea, she can also add her steady on the sea quality for another +1.

A cluster must be approved by the GM.

“Could a Normal Person Do This?” General and Specific Qualities, and Your Limitations

When using general qualities (and not exactly related specific qualities), there’s a basic rule you can follow to know if you can attempt what you’re doing or not. Ask yourself “Could a normal person do this?”

Could a normal person fix a broken hose in a car? With some looking, yes. Maybe not well, but there’s a chance they could discover and possibly solve the problem.

Could a normal person replace an engine in a car? No. They would need training and equipment.

Could a normal person cast a spell? No. They would need some quality that allowed them to use magic.

Could a normal spellcasting person cast a spell they don’t know? No. They would need a quality that allows them to cast that spell.

Qualities: Words You Cannot Use

You cannot use the following words in your qualities:

- Conjunctions (and, but, nor, or, so, yet).

You cannot have the ability to cast spells through your sword AND bow. If you want to use a weapon as a catalyst, it must be a specific weapon. If you want to use more than one, each one must be a separate quality.

- All, every, and other inclusive words

You cannot have the quality master of all styles of kung fu. Kung fu is a good general quality for how you fight. Mantis style, dragon style, and drunken master would all be specific styles that may aid you further.

Likewise, you cannot use those words in your explanation of your qualities. If you have the quality thread the needle, you cannot explain that it lets you be a master daredevil AND be an expert at sewing.

Losing Qualities

Sometimes a character loses a quality. This can be a positive change, such as a character overcoming an addiction—such as spice addict—-or giving up on their quest for vengeance by forgiving the one who wronged them.

It can also show how something fundamental or negative has changed. A character with faithful apostle followers may use them as a meat shield against danger too often, resulting in them dying or the last few losing faith and leaving.

While the GM should not take a player losing a quality lightly, it is possible to lose a quality without gaining a replacement quality.

How to Perform an Action

To perform an action, you always do 3 things in this order:

- Describe
- Roll
- Resolve

First, you describe your action. In your description, you imply the use of as many applicable qualities as you possess. When you finish your description, say the total number of qualities you are using to aid you in your action.

For every quality you can use to aid you, you get a +1 to your roll.

The GM may tell you if you are taking any penalties because of external effects or qualities the target of your action has. The GM may also use a quality you have to give you a -1 penalty. The GM may also give you additional bonuses for external factors.

Second, you roll 2d4 (two four-sided dice). You take the result of both dice, add the number of applicable qualities. If the result is 7 or more, you succeed. If it is 6 or less, you failed.

Third, you resolve. Unless the GM states otherwise, you are still in control of your actions, so you explain how you succeeded or failed at your action.
Simple actions do not require a roll, but what constitutes a simple action is up to the GM.

Dramatic or fun descriptions add to action. It should take less than 30 seconds to offer a detailed and description of your actions with the qualities you will use.

Success Isn’t Easy
To succeed at any action, you must roll a 7 or higher (using the describe, roll, resolve method above). But succeeding isn’t always easy.

When attempting an action, the target gets to apply their applicable qualities that can aid them if they describe how they using them.

For example: A character attacks a t-rex utilizing 3 qualities (+3 to attack). The t-rex has the qualities tough hide, protofeathers, scar tissue, and can’t reach its vitals. Each quality that applies to the t-rex’s defense gives the attacker a -1. Because of the t-rex’s defensive qualities, the character receives a -4 to their action. With the character’s qualities (+3) and the t-rex’s defensive qualities (-4), the character rolls with a -1 to their attack action.

A character uses this same process of utilizing applicable qualities to give the attacker penalties, improve their chances of succeeding at a reaction (such as a trap), or any other action they perform.

Critical Success and Catastrophic Success
When you roll two fours on your roll that is a critical success, allowing you to add a temporary quality to the situation. This could positively affect some people- such as inspire teammates- or negatively affect an enemy- such as distracted by pain.

When you roll two ones on your roll that is a catastrophic success. Instead of failing the roll, you get at catastrophic success.

So long as the action you are attempting is achievable through your actions, you succeed. However, the GM introduces a complication. It could be a temporary quality or something narrative-driven.

Temporary Qualities
When something buffs or debuffs you, it gives you a temporary quality. Blinded is a temporary quality that the GM can use to give you a -1 to all actions involving sight.

A situation or another character may give you the temporary quality rhino’s hide, which gives you a +1 to physical protection.

They can also conjure items. If a wizard has the spell conjure shadow blade, they made themselves a magical weapon that acts as a temporary quality.

As the name implies, temporary qualities are temporary. If it is from an external source, it lasts as long as it can. If the temporary quality is from a character, it will last for a number of rounds equal to the number over 7 they rolled. For example, if the total is 10, it would last 4 rounds. Each round lasts 10 seconds in game.

Damage
Humanoids take damage in 3 categories:
- Focus
- Vitality
- Endurance

Focus damage is anything that effects your concentration or mind. This can be a distraction, such as migraines, stress, anxiety (magical or mundane), or losing your sanity. Or this could be nonphysical damage, such as psychic spells or magical memory loss.

Vitality damage is damage to your physical body as a whole. Poison, disease, hypothermia, and blood loss all examples.

Endurance damage is damage to direct parts of your body. Damage by most weapons or breaking a limb are examples.

How something damages you can change based on the circumstance. If you’re on fire, that is damage to your vitality. If you’re hit with a flaming weapon, that is damage to your endurance.

To track damage, check a box in the category. If you take 7 damage in any category, you fall
unconscious. If you take 10 damage in one category, you die.

The GM may give you a temporary penalty when using qualities affected by the damage. This temporary penalty cannot exceed the amount of damage you have in one category. For example: If you have 3 damage to focus and 2 on endurance, the maximum penalty you can have is -3.

Other creatures and people can take more or less punishment than humanoids.

Area of Effect Damage
Some weapons and spells are designed to hit more than one target. However, making an attack that hits multiple targets increases the difficulty. You take -1 to the attack for each target past the first.

For example, you throw a grenade into a crowd of zombies. You want to hit 3 zombies. You would take a total of -2 to your attack. If you succeed, each of them will take damage. You can use qualities specifically meant to aid you in hitting multiple targets to reduce the penalty.

To effect targets that are distant+ apart from each other, it requires special qualities or items.

Damaging Others
Monsters, spaceships, and villains all take damage like you do. Different enemies and objects will have different amounts of damage they can take, 1 damage of any kind being the lowest.

Some enemies have more or less damage thresholds in different areas. A ghost may have vanish after 3 focus damage but can survive with up to 7 vitality and 7 endurance damage. An acolyte might need a set number of focus and endurance damage in order to stop them.

Healing
Healing damage requires both time and supplies.

Healing damage through magic or futuristic technology is much faster than traditional medicine. To heal, a character performs an action (describe, roll, resolve) using what they can to aid them with healing. For every point over 7 on their roll, they heal 1 point of damage from a part of the body. If they want to heal another part of the body in the same roll, it costs an additional 1 to do so.

For example, if a healer rolled a 10, they could heal up to 3 points of damage on a single body part, or heal 1 point of damage on the target’s head, spend one point to switch body parts, and heal 1 point of damage on the target’s torso.

To heal damage through normal medicine, the method is the same but it takes one minute of constant work to heal each point of damage.

Generally, a person cannot be healed more than once per hour and three times in a single day. The GM may change this if it does not fit their game.

Punching a Rocket Ship
Damage is subjective. A battle between spaceships still has them inflicting one damage per hit. Unless you have some special power or weapon, even the best attack will not damage that rocket ship.

For the reverse of that, if a weapon made to blow a hole in a spaceship hit a person, it would do significantly more damage to them. The GM can decided how severe the damage is. Though hitting a person is much more difficult than hitting something as large as a spaceship.

Having an Item VS an Item as a Quality
If you have a dagger, you do not get a +1 whenever you use it. You simply have a dagger that you can use.

If you have the quality favors small blades, then you get a +1 when using a dagger.

If you have the quality my mother's ritual dagger, then it is an item and you get a +1 when using it as a dagger. If you have both qualities, you would receive +2 whenever using your mother’s ritual dagger.

Items in your inventory are usable and may allow you to perform certain actions, but it doesn’t mean you are proficient with them.

Movement
Your distance from an object, creature, or destination will fall into one of three categories:
- Close
- Distant+
- Far

**Close**
If something is close, that means you can interact with it without moving much (10 or less ft from you. It does not require any additional actions to move (certain terrain or elevation may change this).

**Distant+**
Distant always has a number after it. Distant 1 objects, creatures, or destinations require a turn to get to (around 30 ft from you). If you want to move and take another action, you must split your action (*more on splitting your action in the next section*).

Distant 2 means it requires running or moving quickly to get to it. If you want to get to it and act, you’ll have to split your turn twice.

Normal people cannot move more than distance 2 in a round.

When using a ranged weapon, the number after distant equals the penalty you take for attacking at that distance. This counts for any ranged weapon, including guns, bows, thrown weapons, and magic spells. Qualities (such as *sharpshooter*) items (such as a scope,) and special circumstances (such as an open field with no cover) can all give you a bonus when attacking a creature or object at a distance.

**Far**
If something is far, it means it is too far to get to within a reasonable number of actions. Far objects include a mountain on the horizon, a building in the distance, or going up the stairs to the top floor of a skyscraper.

**Movement is Relative**
Close, distant+, and far will be different depending on where you are. Distance 2 for a person will be less than distance 2 for a car which will be less than distance 2 for a helicopter. The GM determines exactly how far each distance is for each scenario.

**Splitting Your Action**
On your turn, you can perform one action without incurring any penalties. If you want to do more than one action, you must divide your time, making you less effective at each action.

If you split your turn, you can perform two actions but take a -1 to each. You can split your turn again, giving you three actions with a -2 to each. If you are using an action to move distance 1 or 2, it takes that number of actions to move it. So if you want to move distance 2 and interact with whatever you made it to, you would split your action 3 times, allowing you to move distance 2 and act with a -2 penalty.

If the GM says the act will take longer than the amount of time you have (10 seconds for a full turn, less if you’re splitting your action), you must decide whether you will take multiple turns to perform the action or to try something different.

Some things, such things as complicated as building a spaceship or a simple as cleaning a firearm, will not fit into the duration of a round.

**Initiative**
Initiative can happen at any point when the GM needs everyone to act in order.

When in initiative, a full round is made up of everyone’s turn. Each round lasts 10 seconds in game.

Who or whatever starts initiative goes first. After that, characters in initiative can choose what order they go in. If an agreement cannot be made, then each quality a character has that gives them an advantage on going first gets them a +1. Whoever has the highest number goes next. Characters affected directly by whatever started initiative get a bonus +1.

**Magic**
If you want to cast spells of any kind, you need a quality that allows you to cast magic in a general way. When you want to cast powerful or specific spells, you'll need specific qualities.

To cast a spell, first you need a general quality tied specifically to spell casting. This could be a specific spell slinging type. *Wizard*, *necromancer*, *druid*, *pyromancer*, and *fey-
touched are all qualities that give you the basic ability to tap into the magical world.

General magic qualities allow you to do only the very basics of magic, typically things that aid you in a task you can already perform. When you want to do something specific with magic, you need a quality that is the spell itself. Telekinesis, conjure flame, teleport, summon animal, and conjure shadow blade are all qualities that allow you to attempt that action using magic.

Anytime you use magic, you will always use the general spellcasting quality you have. You can have qualities that increase your bonus to casting magic. For example, the quality wand catalyst or staff catalyst gives you +1 when you use a wand or staff whenever you cast a spell. The quality pyro master gives you a bonus whenever you use a spell that involves fire.

See “Temporary qualities” for buffs, debuffs, and spell durations.

**Conjuring Creatures Using Magic**

If you use magic to conjure a creature (animal, zombie, ghost, and so forth), you must have the ability to use magic (through a quality or item) and have a spell tied directly to how you conjure it.

When conjured, the creature will act as it normally would, since you do not have control of it yet (controlling it requires a different spell and action, which includes a another roll). The creature acts on your turn after you, whether you control it or not.

The creature only has one quality. You choose the quality, but it must relate to the creature. For example, a zombie could have strong, diseased, or frightening as a quality. If you wish to give it more qualities, increase the difficulty of conjuring by taking a -1 for each additional quality. You must decide how many qualities it will have before you roll to conjure it.

The creature you conjure lasts a number of rounds equal the number between the number you rolled and 7. For example, if you rolled an 11, the creature will last for 4 rounds (11 - 7 = 4).

**Advancement**

As you play a campaign, characters will become more powerful. To gain advancement, the GM allows each player to choose a new quality for their character. At this time, the GM can choose to give characters another quality, mostly likely one that plays into the characters weaknesses. The GM and player alike can always use qualities creatively to try and manipulate them to make them a benefit or hindrance depending on the situation.

For example, the GM may give an undead character the quality creepy. If a character is always stopping to interact with animals, the GM might give them the quality Always pet the animals. While the player can sometimes use this to their advantage, the GM can also use it

**Formula for the Unknown**

Sometimes you’ll find yourself in a situation where you’re not sure what the direct rule is. If a character is trying something and you’re not certain how to rule it, such as holding their breath or hanging onto the underside of a moving vehicle, allow them to do it for a number of rounds, minutes, hours, or days equal to the number of qualities they can use to aid them in it.

For example, if a character wants to hold their breath, they can do it for a number of rounds equal to the number of qualities they can use to aid them. If they are trying to resist the effects of horrid weather conditions, they can do so for a number of days equal to the number of qualities they can use to aid them.

**Settings**

This book offers several settings, and in addition, it is made to be adapted and work with whatever setting you want to use (whether it is an established fandom or your own creation). Different qualities can work in different settings. A hero-driven, high fantasy setting will likely have looser rules on what you can do than a gritty, realistic sci-fi adventure.

Whatever setting you use, it’s important to establish tones, themes, and boundaries for what players should expect. For example, if you’re doing a sci-fi game, establish what kind of sci-fi it is. Star Trek and Star Wars are both sci-fi, but have
completely different themes, tones, and types of universes to explore.

**Minions and Groups**

If a group of enemies is tightly packed, such as a swarm of insects or a horde of zombies, the GM can remove the penalties for hitting in groups. Each number over 7 effects or damages one more creature in the group.

**Sample Characters**

Here are several characters in different settings you can use in your game. You can also use these to get a sense of how your original character sheets will look.

---

**Setting: High Fantasy**

**Name:** Vularus, the Undead Knight

**Motivations:** Protect my friends | Fulfil my dying wish: save my homeland

**Traits:** Undead | Resistant to the elements | No need to breathe | Creepy | Thick Headed | See in the dark |

**Skills:** Expert swordsman | both hands on my sword | Platemail armor is my second skin | Diplomat at heart | Chilling touch | No need for blood |

**Name:** Raine Starlight

**Motivations:** Master the art of magic | Prove I’m worth something

**Traits:** Human | Determined | Cautious |

**Skills:** Druidic spellslinger | channel magic through my staff | Control the elements | Conjure fire | Manipulate earth | Create Water | Long-distance spells | At home in nature | Overcome impossible odds |

---

**Setting: Spacetrash Sci-fi**

**Name:** Malai Tidewater

**Motivations:** Get paid | Stay out of prison |

**Traits:** Trickster | Resourceful | Frugal to a fault | Self-taught | Clever is better than smart |

**Skills:** Quick | Shade tree mechanic | Keep it together with hope | (Almost a) certified spacecraft mechanic | low-tech solutions for high-tech problems | There’s grease on me somewhere | Impromptu weapon | Why use something for what it was meant for when I can use it for this? |

**Name:** A-Unit 00413

**Motivations:** Obey the first law of robotics | Figure out how to not obey the first law of robotics

**Traits:** Android | Neural link to the ship | Duel-network multitasking (splitting actions) | Inhuman strength | Inhuman durability |

**Skills:** Pilot spacecraft | Advanced piloting | Thread the needle | Knowledge of human anatomy | Unshakable | Curious | Predict likely outcome based on available data | Make a joke |

**Name:** Shogrose Tidewater

**Motivations:** Drink | Fight

**Traits:** Better with a drink in me | Confident |

**Skills:** Kung fu | Drunken master | Master of misdirection | Unpredictable movements | Acrobatics | I’ll try that as long as I have a drink in my other hand | Play with fire | Deflect attack | Oblivious |
Quality Suggestions

Physical abilities
- Strong
- Sturdy
- Agile
- Light on my feet
- Quick
- Towering stature
- Small stature
- Sturdy
- Perceptive
- Ambidextrous
- Tough as a brick wall

 Physical skills
- Quick
- Powerlifter
- Weapon training
- Dual-weapon fighting
- Endurance training
- Undying

Other skills
- Trap making
- Throw money at the problem
- Tinkerer
- Makeup expert
- Thespian
- Sensitive to other’s emotions
- Move without a trace
- A way with words
- Sharpshooter
- Master of subtlety

Method
- Blunt force trauma
- Mind over matter

Personal quirks
- Relentless

- Lucky
- At my best when the odds are against me
- Cautions
- First to try something
- Throw money at the problem
- Learn a secret
- Hungry for knowledge
- Oblivious
- Make friends

Items:
- Sound-dampening shoes
- Bitchin’ jacket
- Lucky backpack
- Side-mirror glasses
- Expensive-looking purse

Conventional melee weapons
- Rapier
- Bo staff
- Flail
- Ishiangu
- Kanabo
- Makaraka
- Mere club
- Urumi
- Bat

Conventional ranged weapons
- Pistol
- Rifle
- Shotgun
- Bow
- Crossbow
- Throwing knives
- Chakram
- Tabar
- Acid-tipped dagger

Unconventional weapons
- If I can grab it, I can hit something with it
- Use the environment
- Wing-mounted blade
Protection

- Chainmail
- Reinforced leather coat
- W.E.T. (weaken external trauma) Suit
- Living insects that crawl over me
- My heart-melting smile
- Faith that harm will not come to me
- Teleport (spell)

- Influence gravity
- The faster I go, the smarter I am
- Super speed
- Unstoppable momentum
- Kinetic energy manipulation
- Cutting insults
- Impossible strength
- Dumb luck

Setting specific:

Fantasy

- Spellslinger
- Pyromancer
- Faith healer
- Monster hunter
- Magic disruptor
- Undead
- Spells
  - Mend wound
  - Pyromantic blast
  - Barbed vine
  - Conjure water
  - Gust of wind
  - Torrent of water
  - Summon insect swarm
  - Heat object
  - Frozen touch
  - Aspect of the viper
  - Alter perception
  - Teleport
  - Grip of the crab

Sci-fi

- Computer savvy
- Synth-reinforced skeleton
- Wireless electronic interaction software
- Galactic Translator
- Echo location receivers
- Cybernetic enhancement
  - Superior vision
  - Sound-identifying hearing
  - Noise-Isolating Combots
  - Flesh repair nanobots
  - Integrated cognitive-enhancing CPU

Villains and Vigilante Powers
